MODALITY:

What is BIDS?

About 20+ different EEG systems
record in different file formats

Dataset info

Motion

Aims of BIDS

→ Makes (neuroimaging-)data FAIR

DATA STRUCTURE

- BIDS is based on simple file formats and folder structures
- Provides a “easy-to-understand” folder structure
- Provides a naming convention for files and directories
- Specifies file formats to use for modalities

METADATA

- Prevents metadata getting lost
- Some metadata is better than no metadata (80/20 rule)

The Brain Imaging Data Structure

The Brain Imaging Data Structure (BIDS) is a simple and intuitive way to organize and describe data.

This document defines the BIDS specification, which provides many details to help implement the standard. It includes the core specification as well as many extensions to specific brain imaging modalities, and increasingly also to other kinds of data.

If BIDS is new to you, and you would like to learn more about how to adapt your own datasets to match the BIDS specification, we recommend exploring the [BIDS Starter Kit](#). Alternatively, to get started please read [the introduction to the specification](#).

For an overview of the BIDS ecosystem, visit the [BIDS homepage](#). The entire specification can also be [downloaded as PDF](#).

<https://bids-specification.readthedocs.io/en/stable/>

My favourite two BIDS principles

Requirement levels

Level of requirement **for**
files and **within** files:

1. **REQUIRED**
2. **RECOMMENDED**
3. **OPTIONAL**

```
├─ README.md
├─ dataset_description.json
├─ participants.tsv

│   └─ ses-01
│       ├── eeg/
│       └─ motion/
├─ ses-02
└─ sub-002
```

participant_id	age	group
sub-001	34	C
sub-002	12	P
sub-003	33	M

BIDS definitions

Dataset - A set of neuroimaging and behavioral data acquired for a purpose of a particular study. A dataset consists of data acquired from one or more subjects, possibly from multiple sessions.

Subject - A person or animal participating in the study. Used interchangeably with term **Participant**.

Session - A logical grouping of neuroimaging and behavioral data consistent across subjects.

Task - A set of structured activities performed by the participant.

Overview files:

- participant.tsv
- scans.tsv
- ...

Subject, session and task specific files

- sub-001_ses-01_task-GoNoGo.eeg
- sub-001_task-Oddball_channels.tsv

Directories and file naming structure

- Data for each subject are organized in subdirectories labeled "**sub-label**", with "**<label>**" representing the unique identification label of each subject
- If subjects participated in multiple sessions, subdirectories labeled "**ses-label**" contain session-specific data within the subject directory
- Each session subdirectory (or the subject subdirectory if no session data exists) contains subdirectories for different data types, only defined if files are present for that type
- For a data file that was collected in a given **session** from a given **subject**, the file name **MUST** begin with the string **sub-label****[_ses-label]****_task-**<label>****

Conclusions

Outlook: EEGManySteps

Thank you for listening carefully

Thanks to **Sein Jeung** for pushing this to completion over the past three years
Thanks to all of the **BIDS Maintainers and Devs** who help to implement this
Thanks to my **working group**, who have given me the freedom to work in this
Thanks to all **participants** who ever provided data which is now in BIDS
